

## Missing Cleaning Bucket? No Problem.

### If Cleaning Bucket is damaged or missing:

- You can use any equivalent container – should be food-safe
- Volume should be ~4 quarts / 3.8 Liters
- Should be ~ 8.5" wide, and ~ 5.5" tall
- When loading for rinse, it should be in the front of the step filter so that flow into the center of the step filter will land in the container.
